August 12, 2004

Commissioner:

The Examiner's Statement Of Reasons For Allowance indicates that Yoshioka, taken alone or in combination of other references, does not teach or fairly suggest a low swing charge recycling circuit comprising, among other things, a static driver including a PMOS transistor and an NMOS transistor which are coupled in series between at least one of (i) a power supply and an output terminal and (ii) a ground and the output terminal (claims 1 and 4); a pass gate network configured to receive the complementary carry input signals, the complementary generate signals and propagate signals and being controlled by the propagate signals to produce a sum signal by applying XOR operation to the complementary carry input signals with the propagate signals; an equalization circuit and a latch circuit (claim 5 and 6); and a voltage swing level of the static

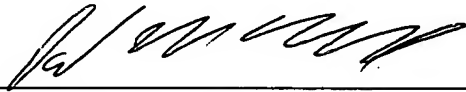

Application No. 10/061,379

driver changes in at least one of (i) from ground level to Vdd-Vth and (ii) from Vth to Vdd (claim 8), as set forth in the claims.

Applicants believe that the Examiner's Statement of Reasons for Allowance, in view of the record of prosecution as a whole, does not fully describe various reasons for allowance of the claims. Moreover, Applicants believe that the record of the prosecution as a whole provides sufficient clarity, explicitly and implicitly, as to reason for allowance of claims, and does so in a more contextual and thorough fashion than the Statement of Reasons for Allowance. While applicant agrees that the claims are allowable, applicant does not necessarily acquiesce with each statement in the reasons for allowance, that patentability requires each stated feature exactly as expressed by the Examiner, nor that each stated feature is required for patentability.

Respectfully submitted,

CHRISTIE, PARKER & HALE, LLP
